

SPORTCOUPE/SPEEDCOUPE LENS CHANGING INSTRUCTIONS

Lens Removal:

1. Hold the top frame of the glasses with your thumb over the nose area. With the other hand grasp the lens and gently pivot the lens away from the frame releasing the mounting tab from the frame. Useful Tip: Use the microfiber bag included with your glasses when grasping the lens to prevent scratches.

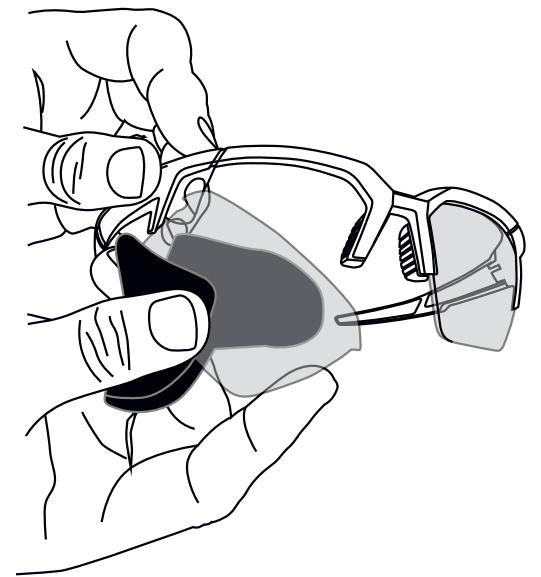

2. Once the inside lens mounting tab is free, continue pivoting the lens until the mounting tab on the end of the lens easily releases from the frame.

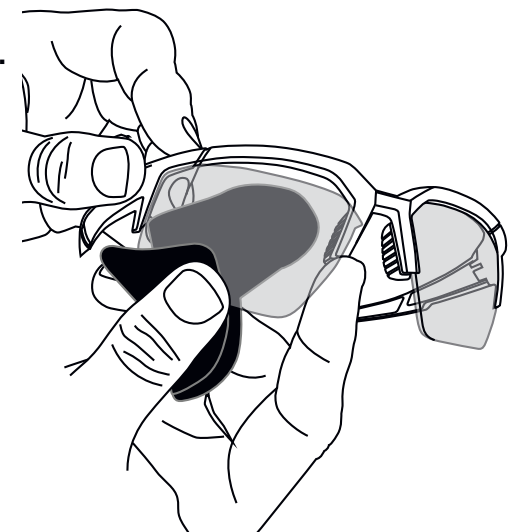

Lens Installation Steps:

1. Hold the top frame of the glasses with one hand while grasping in the center and one end of the lens with the other hand. Gently insert the lens mounting tab into the lens channel of the frame.

2. Gently pivot the lens into the frame lens channel.

3. Once the lens is inserted in the channel gently apply pressure on the lens with your fingers while applying pressure with your thumb on the frame. This will cause the remaining lens mounting tab to “pop” into place.
