- *Includes Arrowhead & OEM part numbers, photos, descriptions, applications and interchange numbers*

- *In addition to Arrowhead products, we have also included interchangeable OEM versions*

- Marine grade that meets SAE J1171 and ISO 8846 standards
- High quality magnets/field coils provide better starting torque
- Double sealed housings
- High quality brushes for longer service life

- Marine grade that meets SAE J1171 and ISO 8846 standards
- Heavy-duty bearings for longer service life
- High quality stators & heavy-duty rectifiers for maximum efficiency
- Heavy-duty regulators for longer service life

**SKT0001**

*Conversion Kit for Nissan / Tohatsu 25HP, 30HP  
and Mercury 30HP Engines*

- *Kit will convert manual start engine to electric start*
- *All items included to convert starter system*

*Easy to follow installation instructions with step-by-step photos included*

**OLD**  
**O.E.M.**  
**VERSION**

- Made of composite material
- Prone to wear and corrosion

**NEW**  
**A.E.P.**  
**VERSION**

- Made of high quality metal
- More durable and longer lasting for a higher quality starter

*The stationary gears have been improved in the following marine starters:*

**SDR0031\***: Used on Cobra, Mercruiser, Thermo Electron, Yamaha, Volvo Penta, (Others), with a V-6 or V-8 Engine. For a Mounting Bolt Kit to use when replacing a 10MT style starter with a PG260 style starter, use HDW9301.

*\*Improvements also apply to SDR0031-L and SDR0031-M.*

**SDR0059:** Used on Mercruiser, OMC, Thermo Electron, Volvo Penta, (Others), With a 4, 6, or 8cyl. engine. Also Used on Lift Truck Applications. For a Mounting Bolt Kit to use when replacing a 10MT style starter with a PG260 style, use HDW9303.

**SDR0252:** Used on Mercruiser 5.7L, 6.2L, 7.4L, 8.1L, 8.9L, 9.0L Engines

**SDR0253:** Used on Mercruiser, Volvo-Penta Marine, and Clark, Hyster Lift Trucks

**SDR0272:** Used on Various Marine Applications

High quality metal gear is embedded into the composite material for added stability and performance

#### **ADR0438**

**For Marine Applications  
IR/EF; 12-Volt; 94 Amps;**

Negative Ground

For Special 120A Version, Use ADR0439;

Used to Replace Hitachi Units on Yanmar Marine Applications (Lester 12107, 12272)

#### **ADR0439**

**For Marine Applications  
IR/EF; 12-Volt; 120 Amps;**

Negative Ground

Special 120 Amp Version;

Used to Replace Hitachi Units on Yanmar Marine Applications (Lester 12107, 12272)

#### **ADR0440**

**For Marine Applications  
IR/EF; 12-Volt; 94 Amp**

Replaces Valeo Units

This is a 10SI style alternator used to replace Valeo alternators (APR0005) in marine applications. Note the replacement unit has an internal regulator. See also ADR0394 (63A Version)

#### **ADR0441**

**For Marine Applications  
IR/EF; 12-Volt; 94 Amp**

Replaces Prestolite Units

This is a 10SI style alternator used to replace the Prestolite alternators (Lester 7041, 7324) with dual top ears listed in marine applications. Note the replacement unit has an internal regulator, while the units listed below do not. The external regulator used with the Prestolite units is not used with this replacement unit  
See also ADR0120 (Single Top Ear)

#### **ADR0445**

**For Marine Applications  
IR/IF; 12-Volt; 160 Amp**

This is a Universal Alternator, Based on a Delco CS130D Design, With Multiple Top Ear Mounting Holes, a 6-Groove Pulley (48.5mm OD), and a 1 Inch Bottom Mounting Spool. For the Same in 220A, Use ADR0446

#### **ADR0446**

**For Marine Applications  
IR/IF; 12-Volt; 220 Amp**

This is a Universal Alternator, Based on a Delco CS130D Design, With Multiple Top Ear Mounting Holes, a 6-Groove Pulley (48.5mm OD), and a 1 Inch Bottom Mounting Spool. For the Same in 160A, Use ADR0445

#### **AHI0059**

# **X** OUTDOOR POWER **treme** EQUIPMENT

**THE HIGH PERFORMANCE CLUTCH LEADER**

**2015 PRODUCT CATALOG**

# The **Xtreme** Difference

**Xtreme** is a world-class performance clutch manufacturer with over 2,400 clutch part numbers in stock

**Xtreme Engineering:** Every clutch was designed and tested using design for Six Sigma and Lean methods. By using DFMEA (Design Failure Modes and Effects Analysis) methods, Xtreme makes a high performance clutch at a better price.

**Xtreme Design:** With machined pulleys, Cool Coil Technology, high performance bearings, stainless steel straps and rivets, Xtreme Tough Wire Protection System, and a replaceable bearing, the Xtreme design is pure performance in every respect.

**Xtreme Company:** Xtreme is a Lean/Six Sigma company. That basically means we can build your high quality clutch and ship it the same day with an impressive cut-off time of noon EST.

**Xtreme Commitment:** Our customers are always first. We offer free technical support and engineering. If you have a special application or engine swap, give us a call.

# OUTDOOR POWER **Xtreme** EQUIPMENT

**FatBoy**  
HEAVY DUTY SERIES

**Torque**  
HIGH TORQUE SERIES

## MACHINED PULLEYS

CNC machined billet pulleys are stronger, quieter, smoother and maintain stable and faster blade speeds.\*

Billet pulleys are used on performance applications like NASCAR engines because they don't spread under load like cheap formed pulleys.\* When a formed pulley "spreads", the belt sinks deeper into the groove. This lowers the belt speed (like a smaller pulley would) and slows down your blades.

## XTREME "COOL COIL"

THE "XTREMELY COOL COIL" RUNS OVER 20% COOLER

Electromagnetic clutches run very hot. Most competitive clutches run around 220 degrees. The Xtreme Proprietary Composite Coil runs 175 degrees. The difference is simple: Less heat = extended life.

## REPLACEABLE PULLEY BEARING

XTREME MOWER CLUTCHES HAVE A REPLACEABLE PULLEY BEARING!

The pulley bearing takes a serious beating and is almost always the first thing to go bad. For that reason, the Xtreme design has a replaceable pulley bearing. (Some models do not have this feature.)

## HIGH TEMPERATURE BEARINGS

XTREME'S SPECIAL BLEND OF BEARING GREASE IS RATED MORE THAN 2 TIMES WHAT IS REQUIRED, DELIVERING XTREME BEARING LIFE.

Electromagnetic clutches run very hot. High temperatures and vibration are rough on bearings. All Xtreme Series clutches use a highly engineered bearing with a proprietary blend of high temperature grease and harder races to ensure a long service life.

FREE UPGRADE!

## TRIPLE PROTECTED WIRES

EVERY XTREME CLUTCH HAS AN INTEGRATED WATER TIGHT CONNECTION WITH 3 LAYERS OF PROTECTION

We use a "water tight" connection at the clutch body instead of a cheap plastic connector with exposed wires.

Heat, water, mud, rocks, sticks and curbs are no challenge for the Xtreme Wire Protection System.

## STAINLESS STEEL RIVETS

XTREME CLUTCHES USE TOUGH STAINLESS STEEL BRAKE RIVETS FOR A LONG AND SAFE SERVICE LIFE

The Xtreme design uses stainless steel brake rivets instead of weak aluminum or copper rivets.

We figure your safety is worth it.

# FATBOY SERIES CLUTCH

COMPETITIVE BEARING

FATBOY BEARING

We increase the size of our pulley bearing to improve bearing life.

The #1 failure of lawnmower clutches is the pulley bearing. Xtreme's new FatBoy Series uses top grade bearings and has a massive replaceable pulley bearing.

# HIGH TORQUE SERIES

The Xtreme High Torque Series clutch has more torque for the serious professional or home owner with the toughest conditions!

# CONVERSION KIT

- No adjustments - Ever!
- Easy Installation
- Plug and Play

## Need Help Finding the Right Clutch?

- Find the clutch part number located on the clutch. Then, use our Easy Xross Reference in Section 1
- Locate the machine model & serial number, and use the internet to find the correct part number.
- Call your distributor with the machine model and serial number

## Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

INSPECT the mower electrical system. Sometimes the reason the clutch failed is the mowers electrical system. Most mowers should read between 13.4 vlt DC and 14.2 vlt DC with the engine at full throttle. Anything less or more and the new clutch will fail.

TIP: The easiest place to check system voltage is at the battery with the engine at full RPM's

**BURNISH:** Don't forget to burnish the new clutch. Burnishing is easy and makes the clutchs gripping stronger and prevents armature warping. Burnishing is Xtremely important!

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.

**NEW ENGINE?** Make sure the crankshaft length and HP are exactly the same. If not, give our free engineering support a call.

Make sure to check the anti-rotation for this installation. We recommend replacing the anti-rotation bolt. Use a minimum of a Grade 5 Bolt. Grade 5 & 8 bolts have the following markings:

Bad Boy machines use a diode in the wire harness:  
 OEM Pigtail Wire Part Number: 070-2000-00  
 Xtreme clutches have the Diode built into our waterproof wire harnesses made for these clutches.

## Installation Tips:

DO NOT use an impact wrench when tightening the mount bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.

## Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

INSPECT the mower electrical system. Sometimes the reason the clutch failed is the mowers electrical system. Most mowers should read between 13.4 vlt DC and 14.2 vlt DC with the engine at full throttle. Anything less or more and the new clutch will fail.

TIP: The easiest place to check system voltage is at the battery with the engine at full RPM's

**BURNISH:** Don't forget to burnish the new clutch. Burnishing is easy and makes the clutches gripping stronger and prevents armature warping. Burnishing is Xtremely important!

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.

**NEW ENGINE?** Make sure the crankshaft length and HP are exactly the same. If not, give our free engineering support a call.

## Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

INSPECT the mower electrical system. Sometimes the reason the clutch failed is the mowers electrical system. Most mowers should read between 13.4 vlt DC and 14.2 vlt DC with the engine at full throttle. Anything less or more and the new clutch will fail.

TIP: The easiest place to check system voltage is at the battery with the engine at full RPM's

BURNISH: Don't forget to burnish the new clutch. Burnishing is easy and makes the clutches gripping stronger and prevents armature warping. Burnishing is Xtremely important!

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.

NEW ENGINE? Make sure the crankshaft length and HP are exactly the same. If not, give our free engineering support a call.

## Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

## Need Help Finding the Right Clutch?

- Find the clutch part number located on the clutch. Then, use our Easy Xross Reference in Section 1
- Locate the machine model & serial number, and use the internet to find the correct part number.
- Call your distributor with the machine model and serial number

## Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

INSPECT the mower electrical system. Sometimes the reason the clutch failed is the mowers electrical system. Most mowers should read between 13.4 vlt DC and 14.2 vlt DC with the engine at full throttle. Anything less or more and the new clutch will fail.

TIP: The easiest place to check system voltage is at the battery with the engine at full RPM's

**BURNISH:** Don't forget to burnish the new clutch. Burnishing is easy and makes the clutches gripping stronger and prevents armature warping. Burnishing is Xtremely important!

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.

**NEW ENGINE?** Make sure the crankshaft length and HP are exactly the same. If not, give our free engineering support a call.

Xtreme clutches have the Diode built into our waterproof wire harnesses made for these clutches.

The diode's job is to stop electrical current from going backwards into the system when the clutch is shut off. Many mowers put the diode in the main wiring harness.

## Need Help Finding the Right Clutch?

- Find the clutch part number located on the clutch. Then, use our Easy Xross Reference in Section 1
- Locate the machine model & serial number, and use the internet to find the correct part number.
- Call your distributor with the machine model and serial number

## Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.

## Need Help Finding the Right Clutch?

- Find the clutch part number located on the clutch. Then, use our Easy Xross Reference in Section 1
- Locate the machine model & serial number, and use the internet to find the correct part number.
- Call your distributor with the machine model and serial number

## Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

INSPECT the mower electrical system. Sometimes the reason the clutch failed is the mowers electrical system. Most mowers should read between 13.4 vlt DC and 14.2 vlt DC with the engine at full throttle. Anything less or more and the new clutch will fail.

TIP: The easiest place to check system voltage is at the battery with the engine at full RPM's

**BURNISH:** Don't forget to burnish the new clutch. Burnishing is easy and makes the clutches gripping stronger and prevents armature warping. Burnishing is Xtremely important!

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.

**NEW ENGINE?** Make sure the crankshaft length and HP are exactly the same. If not, give our free engineering support a call.

## Need Help Finding the Right Clutch?

- Find the clutch part number located on the clutch. Then, use our Easy Xross Reference in Section 1
- Locate the machine model & serial number, and use the internet to find the correct part number.
- Call your distributor with the machine model and serial number

## Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

INSPECT the mower electrical system. Sometimes the reason the clutch failed is the mowers electrical system. Most mowers should read between 13.4 vlt DC and 14.2 vlt DC with the engine at full throttle. Anything less or more and the new clutch will fail.

TIP: The easiest place to check system voltage is at the battery with the engine at full RPM's

**BURNISH:** Don't forget to burnish the new clutch. Burnishing is easy and makes the clutches gripping stronger and prevents armature warping. Burnishing is Xtremely important!

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.

**NEW ENGINE?** Make sure the crankshaft length and HP are exactly the same. If not, give our free engineering support a call.

### Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.

## Installation Tips:

DO NOT use an impact wrench when tightening the mounting bolt. Over tightening the mounting bolt will cause bearing damage. See our installation guide for the proper torque required.

Always check the clutch wire to make sure there will be no rubbing. We supply tie wraps with every clutch to make sure wires are properly secured and protected.

Always replace the clutch bolt if possible. If not, make sure the bolt is clean and free of any oil. Carburetor cleaner works great for removing oily residue.
