

TURN SIGNAL DIODE KIT

The BikeMaster Turn Signal Diode Kit is a must-have item when replacing incandescent turn signals with LED turn signals on bikes with a turn signal indicator light, allowing them to function together properly.

KIT INCLUDES:

- | DIODE/WIRE ASSEMBLY - QTY 1
- | 6" GROUND WIRE - BLACK - QTY 1
- | INSTALLATION INSTRUCTIONS

In order to protect yourself and others from injury and/or property damage, please read instructions carefully, giving special attention to all warnings and notices.

INSTRUCTIONS:

Strictly observe the following guidelines in order to use the product as intended and to avoid potential accidents.

- 1 Before starting, read over all instructions and make sure you understand how to proceed. Park the motorcycle on a flat, hard surface and turn the ignition off.

NOTICE

It is highly recommended to have a factory service manual when performing this installation. If you are not confident in your ability to complete all steps in these installation instructions, consult with a trained technician.

- 2 Disconnect the battery.
- 3 Locate the two wires attached to the turn signal indicator bulb. On some models, disassembly of the dash and/or other components may be required to expose wires. If necessary, check the appropriate service manual for these procedures. Cut both wires in a location providing both adequate room to work and enough wire length to splice both wires.
- 4 Choose one of the wires from the turn signal indicator bulb, either one will do, and run it to a ground. Six inches of extra wire has been provided if needed.
- 5 Splice the remaining wire from the turn signal indicator bulb to the blue wire on the diode assembly.
- 6 Reconnect battery.

⚠ WARNING

ENSURE PROPER TURN SIGNAL OPERATION BEFORE OPERATING THE MOTORCYCLE.

- 7 Secure all wires away from moving parts or extreme heat. Reassemble any components removed to gain access to turn signal wires.

⚠ WARNING

It is the responsibility of the installer to ensure all fasteners are tightened before anyone operates the motorcycle. BikeMaster will not warranty any components damaged due to improper installation.
