

# BATLAX *HYPERSPORT* S20 EVO

Bridgestone presents the hypersports tire that continues to evolve.

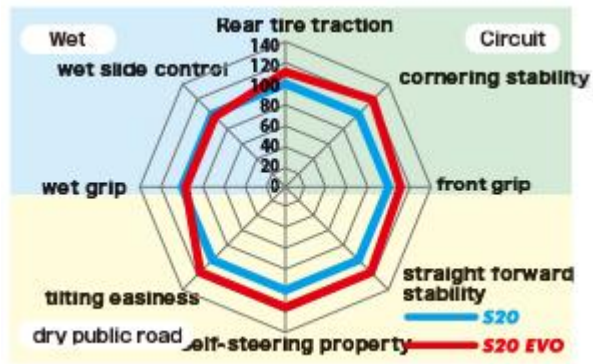

※1 All front tires  
 ※2 All rear tires  
 ☆ For a technical information of H range size technology, please refer to the H range explanation on the following page.

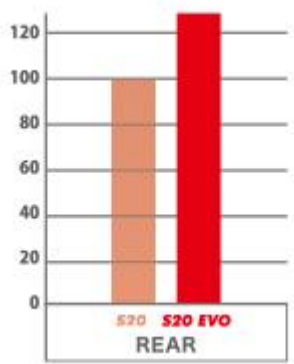

## Recommended for:

- Riders who want to enjoy sport riding such as touring and commuting.
- Riders who want wet and long-life performance in super sport vehicles.
- Riders who want to start track riding.

### Handling performance (INDEX)

### Rear tire wear life (INDEX)

Compared to conventional products, dry performance on public and track roads has been improved greatly. In addition, a longer rear tire wear life has been achieved!

### Special features of the front tire

### Special features of the rear tire

### Compound

- Improved gripping performance has been achieved and wear life has been raised to a higher level by optimizing the rubber position to 5LC.

### Center rubber

- Improved wear life has been achieved while retaining S20's grip characteristics by a center rubber which maximizes material potential.

“One rank above” sports riding has been achieved by fine tuning of the rigidity of the case and ground contact surface. This improves responsiveness in cornering and stability over previous products.

MSB structure which has high rigidity belt material in the front/rear realizes high turning performance.
