

LED Turn Signals

Burly Brand's line of LED turn signals come in both Harley specific and universal application options! Every turn signal has a powder coated cast aluminum housing as well as a UV/impact resistant polycarbonate lens to help illuminate the bright LED units. All signals have 3 wires (Ground, Run, and Turn/Brake) and are designed for ECE/DOT compliance for road use. Our turn signals are a bright and responsive LED replacement for the stock lights that come on your motorcycle. Note: An LED load equalizer may be required to maintain correct blinking speed and operation (any off the shelf unit will work).

Check out a selection of motorcycle signal lights offered in our online store.
