

About Heavy Metal Polish

Chemical Guys Heavy Metal Polish is a specialty metal polish formulated to restore a brilliant shine to severely oxidized and tarnished metal surfaces. When polished metals are left out in the open, oxygen and sulfur in the air reacts with the surface of the metal. Much like rust, this tarnish affects the outermost layer of the metal with a chemical reaction that dulls its shine. Heavy Metal Polish is formulated with specialty metal cleaners that break down and release oxides, tarnish, and contamination to restore gloss and clarity to polished metal parts. Restore stainless steel, copper, aluminum, brass, silver, and gold metalwork, or even metallic coatings like chrome with a lustrous brilliant shine. The advanced protective polymers in Heavy Metal Polish removes stains and contaminants that dull the finish, and help block out oxygen that can lead to future oxidation. Heavy Metal Polish is perfect for polishing diamond plate, trim pieces, brightwork, engine components, exhaust tips, metal wheels, and precious metals on or off any car. Restore the original shine to bare polished metalwork with Chemical Guys Heavy Metal Polish.

Restore Brilliant Shine To Metal Car Parts

Perfectly-polished metalwork complements the beautiful look of any car, truck, fire truck, boat, or motorcycle. Chemical Guys Heavy Metal Polish helps restore the brilliant shine to tarnished and oxidized car parts. Squeeze a few drops of Heavy Metal Polish onto a premium microfiber applicator pad, then gently work it into any chrome, aluminum, stainless steel, silver, gold, or copper surface. If that pad comes back black, then the polish is removing tarnish and contamination from the bare metal surface. If the pad does not come back black, then the metalwork is probably painted with a clear coat that cannot be decontaminated with metal polish. Show how bright you metalwork can really shine by treating faded and oxidized parts with Chemical Guys Heavy Metal Polish.

Remove Tarnish Now; Prevent Tarnish Later

Polishing your metalwork is essential to restoring the gloss and shine to your classic car, hot rod and motorcycle. Chemical Guys Heavy Metal Polish is specifically formulated to remove oxidation, stains and tarnish to restore a brand-new look with brilliant shine. Heavy Metal polish removes tarnished pollution and oxides that dull shine, then seals the metal with protective polymers to help prevent future stains and oxidation. The unique polymer protection technology repels water spots and stains to ensure your precious metalwork is protected from the elements. Heavy Metal Polish is perfect for chrome bumpers, stainless steel exhaust pipes and tips, polished billet aluminum wheels, and any custom metalwork.

Polish By Hand Or Machine

Chemical Guys Heavy Metal Polish makes restoring the brilliance to your metalwork easier than ever. Squeeze a few drops of Heavy Metal Polish onto a microfiber applicator pad, then gently work the polish into the surface. The natural cleaners in the formula break down grime and oxidation to remove anything that blocks light from reflecting off the finish. Chemical Guys Heavy Metal Polish can also be used with a machine polisher: just squeeze 4 - 6 dots of polish onto a microfiber pad and polish the metal parts with a dual action polisher. Chemical Guys Heavy Metal Polish will restore the brilliant shine your beautiful metalwork in less time than old school metal polishes. Traditional formulas have remained unchanged for the better part of 100 years. Chemical Guys keeps innovating because metals are manufactured differently and face different types of pollutants and industrial contaminants than cars and metals did 100 years ago. Use any polishing method to Take down tarnish and restore brilliant reflection and clarity to polished metal car parts with Chemical Guys Heavy Metal Polish.
