

How It Works

Restore a like-new look with a satin shine finish with Silk Shine Sprayable Dressing. Old school cars had shiny vinyl, rubber, and plastic that looked wet and bright. Modern cars have matte and satin finishes on dashboards, door panels, interior upholstery, bumper plastics, door mirrors, engine covers, and even undercarriage parts and tires. Chemical Guys Silk Shine Sprayable Dressing restores this original OEM look without any extra greasy bright wet shine. Spray Silk Shine into a foam or microfiber applicator pad, then work into any vinyl, rubber, or plastic trim piece inside, or outside the vehicle. The water-based formula finishes dry to the touch, and will not leave any parts feeling greasy or sticky. Silky smooth finish will not attract extra dust and dirt, keeping tires and bumpers cleaner for longer. The ultra-refined formula penetrates deep to help nourish and protect a like-new appearance and feel. Sun blockers shield parts from harmful UVA and UVB rays that fade, crack, and break vinyl, rubber, and plastic parts all over modern cars. Patented Weather-Tek formula lasts for weeks of driving in and out of the elements. Add a spray of Silk Shine dressing after every car wash to keep black plastic and rubber parts looking modern and new for years to come.

Satin Shine For A Brand New OEM Look

Vinyl, rubber, and plastic pieces fade and discolor from normal use. UV sunlight, improper car washing, and wear and tear turns smooth black trim pieces chalky and white. Silk Shine Sprayable Dressing nourishes and protects trim pieces to keep them looking and feeling like new. Modern cars don't leave the factory with greasy and shiny dashboards or tires, so why would you want them to look that way? Silk Shine finishes with a satiny smooth sheen and feel that will not attract dirt or dust. The like-new look and feel is perfect for modern cars, trucks, SUVs, and more. Use Silk Shine to make dashboards, door panels, engine bay covers and hoses, tires, bumper parts, door mirrors, and window trim pieces look clean and new. Specialty UV blockers shield vinyl, rubber, and plastic parts from fading and exposure to the sun and elements. Choose Silk Shine Sprayable Dressing for the brand-new look on tires, dashboards, and more.

Best Application Methods For Best Results

Detailers and enthusiasts always ask "Do your tire dressings sling?" The answer is: no premium car care dressings sling if they are applied correctly. Silk Shine Sprayable Dressing is easy to work with, which makes it easy to get perfect results with no messy side effects. Simply spray Silk Shine directly into a foam or microfiber applicator pad, then spread and work into the surface being dressed. Rub Silk Shine directly into tire sidewalls, dashboards, door panels, and bumper trim pieces until it looks fresh and brand new. The refined formula penetrates deep into the work surface, and finishes dry to the touch with no greasy feel. When used as directed, Silk Shine won't sling off of tires and all over the side of your car. The silky smooth feel lasts for weeks on end without attracting extra dirt or dust. Choose Chemical Guys Silk Shine Sprayable Dressing for the silky smooth finishing touches on any modern vehicle.

Need Help Choosing A Dressing? Customize Your Level Of Shine!

Chemical Guys manufactures the perfect dressing and protectant for any desired look. Some car guys want a bright wet shine or tires and bumpers, some want a like-new silky smooth look. No matter the case, check out the full line of Chemical Guys dressings and protectants for the perfect finishing touch on any car, truck, SUV, or offroad vehicle. Use any cream or gel for easy to reach parts that need a lot of attention. Mist a few sprays of any sprayable dressing to make large areas look new and bright again, or pick up an aerosol for hard to cover grilles and grates. No matter the application, Chemical Guys manufactures the right dressing for the perfect look on any vehicle.

Long Lasting

Everyone is tired of tire shines and dressings that only last a couple days at a time. Chemical Guys master chemists blended Silk Shine with patented Weather-Tek additives for extended protection and shine through all the elements. Silk Shine protects and shines through snow and moisture, high humidity and rain, and even relentless sun and high heat. The pH-balanced, water-based formula finishes dry to the touch and delivers a silky satin finish that will not attract extra dirt or dust. Keep your interior and exterior trim, black plastics, and rubber surfaces looking newer for longer with Chemical Guys Silk Shine Sprayable Dressing.

Other Sizes Available

Silk Shine Sprayable Dressing is available in [4 ounce](#), [16 ounce](#), and [1 gallon](#) sizes.

How To Use:

- Clean surface with an all-purpose cleaner or interior cleaner.
- Mist 2 - 5 sprays of Silk Shine directly into foam or microfiber applicator pad.
- Spread Silk Shine over the entire workpiece.
- Work and rub Silk Shine deep into the surface.
- Wait 5 minutes and add additional layers as needed.
- Buff off any excess residue with a microfiber towel.

Feel the difference with Chemical Guys.
