

HOW DO I CLEAN AND CARE FOR MY CORTECH LEATHER PRODUCTS?

- 1.) Do not rub down the garment with a brush or abrasive materials or creams.
- 2.) To remove both insects and dust, simply wipe the area with a soft sponge soaked in neutral soap and water. It is best to promptly remove an organic spots left by insects (e.g. gnats, mosquitoes etc.), since the fluids they contain are quite aggressive on the leather.
- 3.) Any oil or grease should be washed immediately with a soft damp cloth, clean with gentle circular movements.
- 4.) Dry the garment away from heat sources and in a well-ventilated place, it is best to use a clothes hanger to prevent the garment from creasing or taking on shapes that are difficult to eliminate.
- 5.) When a garment is dried after it is accidentally wet, the leather may appear dry or stiff. To restore its initial characteristics use Leather care and Cleaning Kit, which can be found at any auto/moto care store.

**Remember to take great care with garments made of several different materials. In this case, always and only follow the instructions on the garment label.

Fitment & Installation

Q: Will your luggage fit on my bike and how do I mount it?

A: Our luggage pieces are made to fit most every bike model, however proper, snug mounting is essential.

Q: Will my pants zip to my jacket?

A: All Cortech jackets and pants are made to zip to one another as long as you are attempting to attach leather-to-leather and textile-to-textile. If you are trying to connect a leather garment to a textile garment, they will not connect. This is also the case if you want to connect a jacket or pant made by Cortech with another manufacturers' jacket or pant, they are not going to line up and will not connect properly.
