Multicolor Fog/DRL LED Kit Installation Guide

Thank you for purchasing the Diode Dynamics Multicolor Fog/DRL LED Kit!
Please watch our installation video on YouTube prior to installation.

1. To begin, remove the factory bulbs and replace them with your multicolor LED bulbs. Next, plug the 4-pin connector from the multicolor LED bulbs into any 2 of the 4 RGB outputs on the 4-way RGB splitter. Ⓐ
2. Next, plug the 4-way splitter into the RGB LED Controller. Ⓑ
3. Then plug the DC connector with the wire spades into the RGB LED Controller. Ⓒ
4. If applicable, take the black ground and red power signal wire spades and insert them into the included connector. Ⓓ Plug the connector into the factory socket on one side of the vehicle. The other side won't be used.
5. Before securing all wiring with the included zip ties, test your kit.

Troubleshooting

1. If your kit is illuminating in a solid green, isn't illuminating at all, or cannot connect to your WiFi/Bluetooth controller after initial install:

- A. Try swapping the power and ground connections, referred to as flipping your polarity. Ⓓ
- B. Try rotating the 4-pin connectors 180 degrees. Ⓐ
- C. Continue alternating steps A and B until all colors begin to cycle.
