

# DR<sub>x</sub> Beasley's™

*Your Detailing Prescription*

- 1.** To begin cleaning and protecting your car's finish from bugs, first rinse the car and or its infected surfaces (bumper, side mirrors, hood, grille, etc.).
- 2.** Spray Dr. Beasley's Insect Remover on the areas that need cleaning and scrub with the Bug Sponge provided. Re-rinse and repeat as needed to make sure all debris is off the car.
- 3.** Once all bugs have been removed, spray the pH Neutralizer on the spots that you have cleaned previously and begin washing your car. If you are planning on waxing your car, do so immediately after your car has been washed and dried.
- 4.** Once the car is cleaned and dried (and waxed if needed), apply Dr. Beasley's Bug Barrier to spots most prone to bug junk, for example the front bumper, side mirrors, grille, and hood; then wipe with towel for uniform coverage.
- 5.** Reapply after heavy rain and each wash to keep your car protected.
