

EE Left Fork Leg Guard Installation Instructions

- 1 Using a 17mm socket, remove the front axle bolt. (Fig. 1)
- 2 Using a 10mm t-handle or socket remove the lower brake caliper mounting bolt. (Fig. 2)
- 3 Mount the disc guard to the fork leg using the original front axle bolt but only finger tight at this time. (Fig 3)
- 4 Apply some thread locking agent to the threads of the supplied 8 x 55mm hex head flange bolt that will replace the original caliper bolt you removed in step 2. (Fig 4) With a 10mm T-handle or socket lightly tighten the 8 x 55mm bolt into the lower brake caliper mounting hole. (Fig 5)
- 5 Using a torque wrench with a 17mm socket, torque the front axle screw to the manufacturer's torque specifications.
- 6 Using a torque wrench with a 10mm socket, torque both the lower and upper brake caliper mounting bolt to the manufacturer's torque specifications.
