7	1	WASHER	1735

INSTRUCTION SHEET FOR TOOL #901

- Attach the installation bar tool No. 987-2 to the trap door side of case. Use two allen screws with washers H-D No.3249 from existing trap door mounting hardware. See Fig 2 for door mounting holes to locate plate correctly on case. Also, the plate has been laser marked with "Top" on the plate and should face you.
 See Fig 2.
- 3. Install No. 1735 onto No. 2138 12" long screw then insert through center hole of No. 987-2 installation bar and into case, through the mainshaft gear. See Fig 2.
- 4. Lube threads on end of screw No. 2138 hanging out of main drive gear. Install No.35316-80-7 maindrive gear washer, bearing No. 2010, No. 2038 washer and then No. 2136 nut on screw end. See Fig 3.
- **5.** Use two 3/4" box end wrenches to remove gear. Hold No. **2138** screw with one wrench while using the other to tighten nut No. **2136** clockwise and the gear will come loose from the bearing.
- **Caution:** When performing the next step of removing the gear from the bearing you may encounter some resistance beyond what this tool can handle and could damage the case. If you feel a binding stop and apply heat to the bearing race as shown. Do not exceed 210 degrees. This should free up the gear. If that doesn't work it will be your decision on how to extract the main drive gear and bearing. **See Fig 2 & 4**

CAUTION: WEAR SAFETY GLASSES OVER YOUR EYE'S. SEE JIMS® CATALOG FOR HUNDREDS OF TOP QUALITY PROFESSIONAL TOOLS. THE LAST TOOLS YOU WILL EVER NEED TO BUY.
