

# INSTALLATION INSTRUCTIONS

## Part Number HA-7598

Congratulations, you have purchased the finest air filter that money can buy. With proper care, this filter will last 1 million miles or more. This filter may be used in a stock machine, with no modifications required. However, if any modifications have been made, tuning/jetting adjustments may be required. The following procedure **MUST** be followed to ensure a proper fit and seal of the K&N® air filter.

### INSTALLATION:

1. Remove the stock [air filter](#).
2. Remove the stock o-rings from the air box lid and air box base.
3. Install the K&N® air filter into the base of the air box.

**NOTE: For 1987 Honda VF700C Magna's ONLY; if you experience performance problems after installing the K&N® replacement air filter, please install the provided foam restrictor into the inside of the air box lid. DO NOT oil the restrictor.**

4. Reinstall the air box lid and tighten the stock screws. Do not over-tighten.

**NOTE: When closing the air box lid with the foam restrictor, make sure the restrictor does not slip onto the grooves of the air box. This can cause the air filter to not seal properly.**

**THESE INSTRUCTIONS MUST BE FOLLOWED EVERY TIME THE FILTER IS SERVICED, OTHERWISE THE FILTER MAY NOT SEAL, AND DAMAGE TO THE ENGINE COULD RESULT.**
