MOTORCYCLE

TURN SIGNALS I TAILLIGHTS I HEADLIGHTS I ACCENT LIGHTING

Letric Lighting Co. was founded on the idea of providing premium motorcycle lighting that's easy to install without breaking the bank. We know you have many choices when it comes to buying LED's for your ride, but we want to show you why we are the **best** choice!

Founded in 2018 by the crew at NAMZ Custom Cycle Products, Letric was born with quality in mind. Having silicone conformal coated circuit boards allows us to offer a LIFETIME warranty on our bullet style LED puck inserts. Why a lifetime warranty, because we believe in our manufacturing, testing and final inspection processes. Just like anything we build, every product is scrutinized by professional employees, that love coming to work every day, before it leaves our building.

Most of the lighting in this catalog features our Plug-n-Play technology to make life easier for you. Let's face it, the less time you need to work on your bike, the more time you have to ride it! Plug-n-Play means we have taken the guesswork out of the installation process. Our "replacement" products are designed to plug in and fit just like the factory lighting you are swapping out. It is our goal to provide you with the best experience possible!

Many of our lighting products utilize surface mount LED's that are able to illuminate in multiple colors. This is important because it means that all the LED's on the board stay lit during each color change, making for a brighter light. Surface mount LED's are also less expensive due to the manufacturing process and keeping costs down enables us to pass those savings on to you.

So before you buy LED lighting from just anyone or through a discount website, get to know what Letric Lighting Co. has to offer. We're sure that once you try our lighting, you will know why we are so passionate about what we do.

TURN SIGNALS

One of the easiest and most impactful changes you can make to a bike is swapping out turn signal bulbs for LED's. Why would you want to get rid of those old fashioned incandescent bulbs? Well, for starters, our Bullet LED Inserts are much brighter than a standard bulb, and we accomplish this using 48 high-quality, surface mount LED's on each board. Brighter is better, not just because of the added style and good looks, but because it's safer too.

Our Bullet LED Inserts are sold in pairs and come with an industry leading **LIFETIME** warranty. *(*some restrictions apply)* That's right, a lifetime warranty and we can do this because we only use the very best components and manufacturing processes when building our LED products. So if we're so confident in our Bullet LED Inserts, shouldn't you be too?
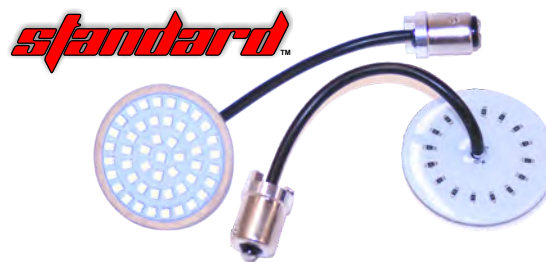

We offer much more than Bullet LED Inserts. So take a look through our turn signal section, and we are pretty sure you can find what you're looking for!

Bullet Turn Signal Inserts

- High quality, surface mount LED's
- Available in 1156 or 1157 sockets
- Thick conformal coat protection
- All LED's produce both colors
- Installs in seconds with a Lifetime Warranty!

- White run light & Amber turn signal
- Ultra bright LED's perfect for supplemental lighting
- Requires custom installation

PART NUMBER	DESCRIPTION
LLC-PSM-TS	**Polished** Surface Mount Signal Indicator Lights, dual function, WHITE running light and AMBER turn signal light, Pair

LED TAILLIGHTS

The second most popular lighting upgrade is to swap out the stock taillight with an LED version. There are options... not only do we offer "OEM style"/Squareback LED taillights, we also have "Slantback," which feature a slanted surface area for a more aggressive look. We even have a "Low Profile" version Slantback as well! These Low Pro taillights have an even thinner profile than Slantbacks and provide the smallest OEM style taillight available.

All of our taillights come with stainless steel mounting screws, just because we want you to have all that you need when it's time to install. Our goal is to provide simple time saving solutions! All taillights feature Plug-n-Play connections (except for turn signals) to make the install short and sweet. And because we don't take short cuts, we give you color matching wires and the OEM terminals so you can easily hook up the optional/pre-installed turn signals on select taillights!

Letric Lighting Co. also offers OEM style replacement LED's for Softail®, Dyna® and XL® Models. These lights are designed to fit just like the originals and offer ultra-bright LED's keeping your back end more visible!

Slantback Standard LED Taillights

- Clear license plate window
- 100% Plug-n-Play & comes with stainless screws
- Fits most '99-Up models with center taillight

PART NUMBER	DESCRIPTION
LLC-STL-R	Slantback LED Taillight, 100% Plug-n-Play, a **RED** LENS, clear license plate window & fits HD models with squareback taillight from '99-Up. Comes complete with OEM connector and stainless steel mounting screws for an easy installation.

Slantback Standard LED Taillights

- Clear license plate window
- 100% Plug-n-Play & comes with stainless screws

Letric Lighting Co.

BAGGER LIGHTS

Letric Lighting Co. prides itself on having a wide offering of LED lighting for all models, and baggers are no exception. The bagger or "Geezer Glide," as they were known as back in the day, have become very popular over the last 10-years. Big front wheels, cut and raked frames or even high performance engines and suspension are all very popular modifications today. Along with all of these options, having the right lighting is key!

Swapping out OEM lighting for LED versions is done for many reasons. Riders are concerned with looks, style or even the fact that LED lighting draws far less current than standard incandescent or halogen bulbs. But whatever your reason, we offer plenty of options. Our goal is to offer style, performance and an easy installation. And all of the lights in this section meet that criteria and hopefully exceed all of our expectations!

Our Tour Pack LED's, Fender Tip Tri-Bar and Rear Fender Fascia Kits are designed to fit just like the "OEM" versions, while our Saddlebag Spoilers, Rails and Tour Pack Wing LED Lights, all add the extra style you're looking for with only a touch of custom work on your part. *NOTE, black or "paint ready" items do not have to be painted but are noted because they can be if you choose.

LED Saddlebag Rails

- Chrome plated, saddlebag lid luggage rail
- Ultra bright Red LED's
- Requires custom installation

PART NUMBER	DESCRIPTION
LLC-SBLR-C	**Chrome** Saddlebag Lid Rail Guard with Light Kit, Fits: 1993 through 2013 OEM Hard Saddlebags. Provides RED running light and RED brake or turn signal functions. (comes complete with wiring harness and mounting hardware)

LED HEADLAMPS

Letric Lighting Co. is the new LED supplier on the scene but we **do** have the experience to deliver. We have the very same foundation in place that our parent company, NAMZ Custom Cycle Products, was founded on back in 1999! Quality products and consistency is what were are made of.

The reason we created Letric Lighting Co was to offer customers an option for premium LED lighting at a fair price. Sure, there are many options out there, but **NOBODY** can offer the wiring expertise, industry leading lighting modules and now LED's like we can. We feel our catalog offers just that and you can feel comfortable buying from a company you can rely on!

In this section, you will find replacement LED lamps for 4.5" passing/fog lamps, with and without brackets & turn signals, 5.75" and 7" headlights and Road Glide® Models. Easy to install and available in chrome or black finishes, these LED replacement lamps are a perfect upgrade from OEM standard sealed lamps or 55/60 watt halogen bulbs. Will fit most headlights and applications including CAN/Bus models 2011-Up Softails®, 2012-Up Dynas® or 2014-Up FL/Dresser® **without** causing codes. It's about value, and you can't beat the quality as we also have the service to back up everything we sell.
