## Traction on mid-soft terrain

The tread pattern of Metzeler MC 360™ MID SOFT is designed to provide great traction on soft and mid-soft terrains.

The front tyre has 5 rows of knobs longitudinally aligned with the ones on the shoulders.

Front center knobs are very wide, alternately different-sized and characterized by curved shape maximizing maneuverability, carving and then traction on soft terrains, support and directionality. They are also alternately divided in 2 and 3 sections to maximize comfort by balancing the overall stiffness.

On the shoulders, the diamond-shaped knobs ensure contemporarily carving efficiency on soft terrains and great durability; the wide voids between the knobs ensure self-cleaning from mud and dirt.

Rear tyres have 3 rows of knobs, the center and the shoulder ones.

Rear center knobs are alternately divided in 2 and 3 sections whose double function is to maximize comfort and to enhance the performance when both entering and exiting turns.

Diamond-shaped shoulder knobs couple with the lateral cut sections of center knobs to ensure grip at any lean angle.

## Versatility of use

Metzeler MC 360™ is dedicated to racers of Motocross, Supercross, non-F.I.M. Enduro, Freestyle providing maximum performance in any possible racing condition. Versatile, strong and durable tyres reduce the tuning effort on the motorcycle by lowering the number of parameters to be tuned-up.

Training with the same high-performance tyre of the race increase the confidence, the ability too and the possibility to finally win.

Amateur racers will appreciate the plug-and-play solution to perform at their top with very few vehicle adjustments and an easy-to-use and always under-control tyre.

Cross-country racers ride both Motocross and Enduro motorcycles on mixed courses with fast Motocross sections, using either 18" or 19" rear tyres. They will find in MC 360™ both Motocross performances and enduro versatility and durability.

Motocross & Enduro for-fun riders will enjoy a valuable product with great dynamic performances. They need both Motocross and Enduro sizes based on their choice of machine and their eventual need for different-sized rims.

## Durable and reversible

All MC 360™ tyres have a reversible tread pattern to prolong tyre life and give the possibility to reverse knob's angle of incidence, when needed to maximize traction between one round to another.

Center knobs are very wide and thick to gain consistency and durability.

The structure of Metzeler MC 360™ is a high module, low shrinkage tri-ply made of strong and impact-resistant fiber.

The polymers and ingredients used to develop Metzeler MC 360™ compound are focused to increase knob's stiffness for high-level dynamic performances and maximum resistance to heating and dynamic stress, to ensure a constant performance through the tyre life.

The new compounds were developed to deliver durability, tearing, cuts and puncture resistance, capitalizing on Metzeler's expertise in racing Enduro. The new compounds are 100% carbon black with a blend of both synthetic and natural rubber, providing high tearing resistance and durability.

## Wherever you go

All Metzeler MC 360™ range is street-legal for dimensional and integrity requirements.

Using legal on-road fitments enables them to go back and forth to the track/training ground, or simply the wood close to home.
