

# MFW Crashbar Footpeg System Guide

The MFW Crashbar Footpeg System helps motorcycle riders find the most ergonomic riding position by offering alternate footpeg positions. By allowing the legs to extend to the "highway" pegs located on the crash bars, riders can extend their comfort during long days in the saddle. The complete system is made up of 2 parts: the Crashbar Footpeg Mounts and the Footpegs themselves. Unless you are replacing a component or adding to an existing system, you will need to order all parts for this to work on your motorcycle. Here is a quick rundown of the components you will need to choose from.

**Crashbar Footpeg Mounts** are available in black or silver to match your crash bars. These clamping mounts are adjustable from 0.85" (21mm) to 1.125" (28mm) and will allow you to mount to just about any crash bar on the market, including SW-MOTECH and Givi crashbars.

**MFW Footpegs** are available in various styles to match your taste of riding style as well as your choice of black or silver finish.

**MFW MasterSafe Stash Footpegs** incorporate a hidden compartment and a special key that allows secret storage of small items or documents. These pegs measure 4in long. Due to their length, they are recommended for passenger use only.

**MFW Master Grip Footpegs** are CMC machined with pronounced ribs and knurled contact points to enhance grip. They measure 3.25in long.

**MFW Racing Footpegs** measure 3.25in long and are CNC machined with knurled surfaces for grip and a slanted design to improve clearance.

**MFW Super Grip Footpegs** measure 3.25in long and feature vulcanized rubber padding for extra comfort and grip.
