Motocross tyres for sandy conditions. Tread design of the rear tyre has a semi-paddle construction with spacing between knobs that ensures maximum self-cleaning. Large centre and aggressive side knobs provide traction. Tread design of the front tyre acts like a paddle to evacuate sand and deliver traction. A sharp paddle design with a reinforced shoulder supports hard landing after jumping and braking. Tread compound is characterized by high hardness and does not soften during the race.

Motocross tyres for soft to medium terrain. Tread pattern is designed to ensure enhanced traction through the soft ground. Tapered knobs bite deeply into soft terrain and provide improved acceleration, cornering and braking without losing traction. The tyre has a superb self-cleaning ability thanks to wide space between knobs.

TERRA FORCE-MX SM has a softer compound than TERRA FORCE-MX SAND.
