

Warmest Gloves for Riding Motorcycle in Winter

If your hands are cold, it's game over.

Selecting winter riding gloves for windchill and precipitation is a priority for every cold weather rider.

To choose the warmest gloves: Choose a glove with a good gauntlet, and [Gore-Tex](#) or other comparable waterproof, windproof, breathable, insulated construction, for ample warmth below 45 degrees.

Leather gloves are naturally warm and windproof, so they have an edge for winter riders. The updated [WeatherKing Extra Touch \(Style 4102\)](#) is one of our most popular and warmest styles.

Your taste might point you towards something else, like the [Aventador \(Style 4294\)](#) with extra insulation around the fingertips.

And if you have heated grips, choose a style of glove that is a little thinner on the palm side, but still with plenty of insulation on the back of hands, such as our [Cold Throttle Glove \(Style 4370\)](#).

Warm, not bulky: One final note about winter motorcycle gloves: Extremely insulated gloves can also be a bit bulky. The worst thing for a rider is to lose the precision, control and dexterity that comes with comfortable fingers ... so try winter gloves on before purchasing to make sure hands and fingers can still grip the controls comfortably.

Olympia Cold Throttle Men's & Women's Motorcycle Gloves
