

DIABLO™ ROSSO II

DETAILS

PROPERTY

Bi-compound

EFFECT

Differentiated behaviour of the tyre
Long lasting on road, excellent grip
at full lean

PROPERTY

Slick shoulder area

EFFECT

Maximum grip at full lean
Confidence and top performance
whilst cornering

DETAILS

PROPERTY

EPT

EFFECT

Contact patch optimization
Give the bike more contact with the
road surface

BENEFITS

The DIABLO Trademark represents the excellence of the Pirelli Brand in the motorcycle tire industry. The Diablo family has rapidly evolved from its 2002 introduction in the supersport segment to cover many other market segments from Racing to Hypersport.

The current Diablo Trademark consolidates 8 years of experience, technology and victories in prestigious tests and competitions.

A consistent choice as original equipment by top bike manufacturers, all Diablo marked products are also considered a reference by the most acclaimed international magazines.

From this history and rich background is born the new DIABLO ROSSO II.

TRACK USE

ROLE AND POSITIONING**PATTERN****COMPOUND****BENEFITS****FRONT TIRE**

Diablo Rosso II front tire is derived from Diablo Rosso Corsa (see picture right) to provide:

- Improved drainage
- Better wear regularity
- Efficient braking

REAR TIRE

When compared to the predecessor (see picture right), Diablo Rosso II rear tire features an increased slick area in the central rib and on extreme shoulder. This provides:

- Mileage and braking
- Dry Grip at maximum lean

ROLE AND POSITIONING

PATTERN

COMPOUND

BENEFITS

BI-COMPOUND REAR TIRE

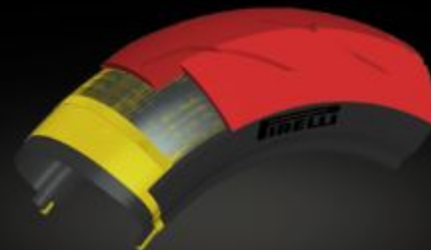

Diablo Rosso II applies the Bi-Compound concept to the REAR tire:

In the CENTRAL AREA (75% of total surface)

the high silica content compound, blended with a reactive polymer provides a **BALANCED** performance to offer Wet Grip, Stability and Mileage

In the SHOULDER AREA (25% of surface)

the fine carbon-black and resins compound provides the **SPORT** performance for Dry Grip at high lean angles

ROLE AND POSITIONING

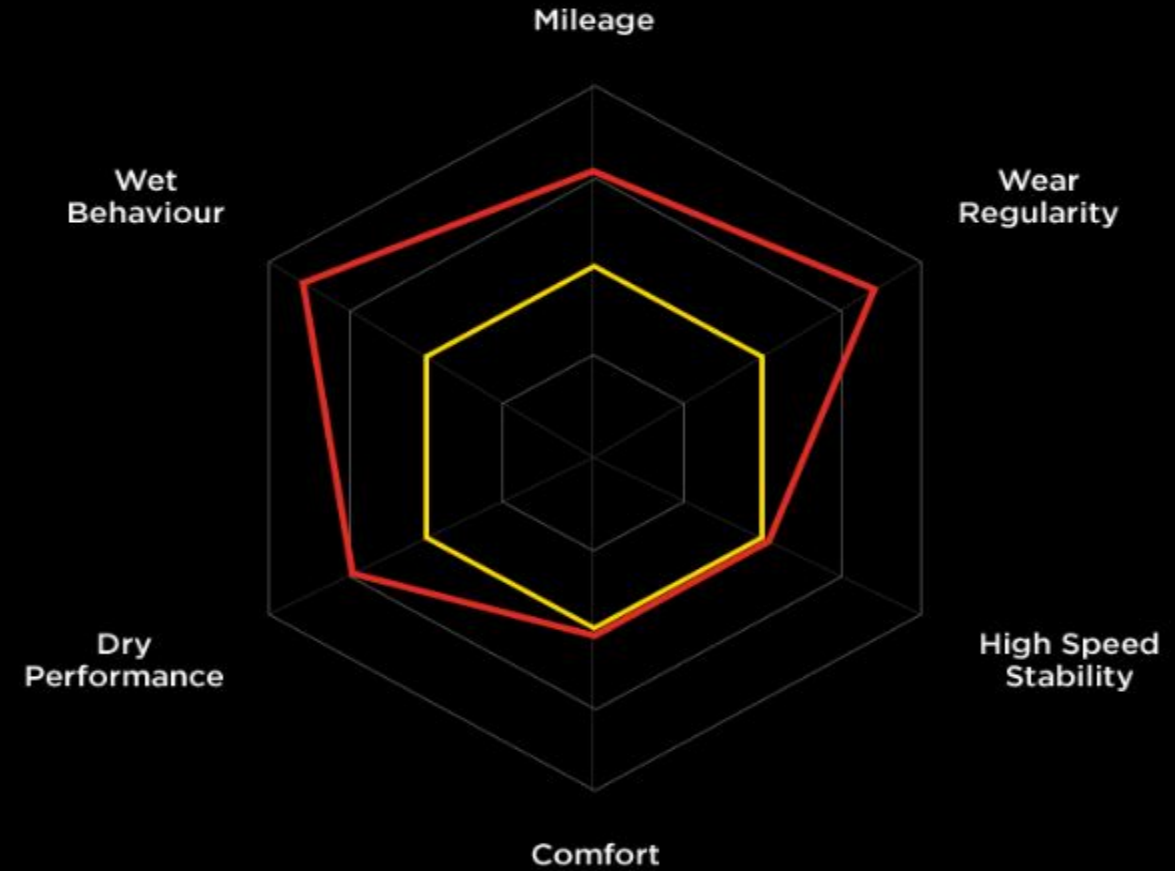

PATTERN

COMPOUND

BENEFITS

Diablo Rosso II has increased the regularity of wear, thanks to the improvements on the tread pattern design that in combination with a specific silica compound offers both an excellent grip on wet and extended mileage.

The second, softer compound, derived from the experience of Diablo Rosso Corsa and localized along the naked shoulder of tread design, offers a superior grip while cornering at full lean angle.
