

# SCORPION™ MX 32 MID HARD

## DETAILS

### PROPERTY

### EFFECT

New block layout with links (or “bridges”)

Tread stiffness with each block having an increased traction and power transmission  
Resistance to block tearing over time

Totally new rear tread pattern for mid-hard surfaces

Excellent traction even on increasingly severe terrain conditions during the race  
Optimal resiliency for consistent performance even at end of life

Unique compound surface area and carbon black structure

Transfer of power to the ground, prevention of overheating  
Extended use on loose surface, stones with regular wear and stiffness
