

## KTM BEARING UPGRADE

### *Wheel Bearing Snap Ring Notice*

---

This Pivot Works kit, PWRWK-T12-000, contains bearings that are 2mm wider and have an increased load capacity over the OEM. Due to the increased width of the bearing, the original snap ring is no longer needed in the wheel hub. Since the width of the bearing compensates for the space occupied by the snap ring, this upgrade will not alter the bike's handling or require further modification.

This kit also includes a hard anodized spacer, dust seals, our new hard anodized watertight wheel collars and two sets of o-rings.
