

INSTRUCTIONS TO ASSEMBLE

- 1- Remove the front and rear seat, and the left part of the rear cowl. Dismount the central plastic piece that joins together both sides of the rear cowl, as well as the support where the mechanism to lock the rear seat is located. Remove the electrical installation that is fixed through two rubber bands. Once this is done, we will have access to the fasteners (6) to remove the original license support.
- 2- It is recommended that before mounting the original support, the turn signals (position 7) and license light are mounted. Guide the cables with the bridles supplied through the slots of the support (this operation gets complicated once the license support is mounted).
- 3- Mount the license support supplied, using the original fasteners (6) jointly with the washers (3) and nuts (5) supplied, on the position close to the turn signals. On the other positions, use the fasteners supplied (2) jointly with the washers (3), and the metal arrowhead (4), and nuts (5), as the figure shows.

Material supplied to assemble the license support:

	DESCRIPTION	QTY
1	License support	1
2	M6x35 DIN933 white fastener	2
3	M6 DIN9021 white washer	6
4	Aluminium arrowhead	2
5	M6 DIN6923 locknut	4
6	Plastic bridles	4
7	Reflector	1
8	Support for reflector	1
