

Renthal's 1 1/8" (28.6mm) handlebar mounts are designed to allow the mounting of oversized 1 1/8" handlebars, such as the Twinwall or Fatbar, on certain model motorcycles which are equipped with 7/8" handlebars as standard. These are CNC machined from 6082 T-6 billet aluminum and black anodized with laser etched Renthal logo.

The mounting studs are a special CNC machined hardened nickel chromoly steel with a machined relief to allow for the bending of the stud in the event of a hard crash. Our 1 1/8" mounts are meant to be a direct OEM replacement for the stock 7/8" mounts and will replicate the OEM bar position and height.

Designed to use the OEM rubber cones, replacement studs are available. Sold as a pair.

- The clamps are CNC precision machined from 6082 T6 solid billet, high strength aluminium alloy.
- Precision CNC machining ensures a perfect fit between the handlebar and clamp for maximum clamping strength.
- The bolts are CNC machined from nickel chromium molybdenum 817M40 steel and the hardened and tempered to grade W strength.
- A unique bolt head design with part hemispherical seating blended into the shank minimises the chance of bolt failure.
- Renthal bar mounts are designed to replicate the bar position of the OE bar mounts.
- Black anodised finish.
- Please note Renthal bar mounts are designed to utilize the OE rubber cones.
