

## The Risk Racing® Palm Protectors

*Full coverage palm protection against blisters*

Troutman, NC – Motorcycle riders and racers are all too familiar with blisters. They can tear up the hands of even the strongest riders. Blisters can single handedly take the enjoyment out of your ride, force you to take time off the bike, and more seriously, cause infection.

Risk Racing has developed a low-profile blister solution called Palm Protectors. Palm Protectors offer full coverage protection to the areas of the hand which are affected by blisters and irritation from riding. They are a very thin, protective layer that slip under the riders' glove to manage friction, rubbing, heat and moisture; all factors that cause blisters.

Palm Protectors cover and protect the entire palm area, as well as the saddle area between the index finger and thumb. Riders don't even notice the ultra-thin layer of protection when riding, but they do recognize the vibration reduction and much needed shield against blisters. Some riders even notice a reduction in the dreaded "Arm Pump".

Worn by pros in all aspects of racing from Supercross, to GNCC and Moto GP, Palm Protectors are proven to protect the fastest hands in the world. Whether riding on the track, trails or roads, all motorcycle riders can defend their hands from blisters with Palm Protectors.

# Protects Against Blisters & Reduces Vibration

Motocross and trail riders are all too familiar with blisters. They can tear up the hands of even the strongest riders. Blisters can make holding onto your handlebars a painful and sometimes dangerous experience due to loss of grip. They can single handedly take the enjoyment out of your ride, force you to take time off the bike, and more seriously, cause infection.

Knowing the debilitating effects of blisters, it was the goal of Risk Racing engineers to develop a solution that offered full coverage protection to the areas of the hand which are affected by intense friction, rubbing, heat and moisture.

Motocross racers, trail riders, and road racers alike can benefit from the Palm Protectors.

## Full Coverage Protection

Palm Protectors are a very thin, protective layer offering full coverage protection of the palm as well as the saddle area between the index finger and thumb.

# Reduce Arm Pump

The Palm Protectors also aid in reducing the dreaded “Arm Pump” by absorbing vibration transferred through the handlebars.

# Wear Under Gloves

Worn under the gloves, riders don't even notice the ultra thin Palm Protectors, but they do recognize the vibration reduction and much needed protection against blisters.
