

A laminated Technomico is used as the base material in all areas.

All buckles move independently of each other and have just one fixed point (by a screw). This allows an easy closure and the buckles can adapt to the rider's position as they pivot on the mounting screw as the rider changes position on the bike.

Inner heat shield made of high grip material.

Calf plate system features an inner double adjustment that expands to fit even the largest calf or knee brace system!

All new ankle pivot system is designed to have a "hard" limit of foot/ankle hyperextension.

Lower buckle guards help protect against opening due to an impact.

An all new rigid, shock resistant, anatomically shaped heel holds the riders foot firm and thus resists twisting while offering added protection. Replaceable, sleek, micro adjustable cam lock buckle system with memory retention nylon straps.

Nylon insole no dangerous steel shank!

TA sole is best suited for riders who may walk in their boots some. TA sole is made of anti-skid rubber and can be replaced by a cobbler. TA sole features excellent rear brake feel.
