

Replaceable, sleek, micro adjustable cam lock buckle system with memory retention nylon straps.

All buckles move independently of each other and have just one fixed point (by a screw). This allows an easy closure and the buckles can adapt to the rider's position as they pivot on the mounting screw as the rider changes position on the bike.

Replaceable by hand tools the new Dovetail SR anti-skid rubber sole covers the arch area of the sole. Toe and heel areas on the new Dovetail SR sole are now a permanent part of the Crossfire 3 SR.

Toe area covered in protective plastic.

1-Assembled and replaceable boot leg is stitch free and is 1cm taller than the Crossfire-2.
2-Replaceable inner kick starter/foot peg nylon guard on the inside area of both boots.

An all new rigid, shock resistant, anatomically shaped heel hold the riders foot firm and thus resists twisting while offering added protection.

Calf plate system features an inner double adjustment that expands to fit even the largest calf or knee brace system!

New inner boot gaiter has a larger circumference than the Crossfire 2 making for a tight seal around the rider's lower leg no matter which knee brace system may be used. Upper inside of the gaiter features an anti-heat suede protection-grip panel.
