TECNOLOGY

REPLACEABLE SHIN PLATE

• • The thermoplastic front shin plate is anatomically shaped and replaceable, an exclusive-patented Sidi feature.

MICRO ADJUSTABLE AND REPLACEABLE BUCKLE SYSTEM

• • The Crossfire utilizes four micro adjustable buckle closures, with indented memory-regulation straps. The buckles, straps and retaining clips are easily replaceable. The buckles have just one fixing point (by a screw), which allows them to be easily replaceable. You will note that all four buckles work independently from each other. This system allows the boot to fit all shapes of feet and lower legs independently making each boot that much more comfortable for each individual rider.

HYPER EXTENSION BLOCK

• • The Crossfire 3 srs has an articulated joint on the ankle, called "HYPER EXTENSION BLOCK", with completely revolutionized technology. It prevents the hyper extension of the ankle, the instep and the posterior tendon when the leg is flexed forwards or backwards. This technology guarantees the rider's safety.

REPLACEABLE METATARSUS INSERT

• • A rigid replaceable nylon insert has been added to protect the inside of the boot in case the rider's foot slides off the foot peg or if it slips off the kick-starter. The insert is replaceable by unscrewing the 4 screws.

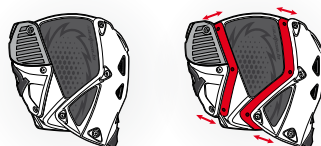

THERMOPLASTIC DEFENDER ON THE TOE AREA

• • The toe is entirely covered by plastic protection panels with an embossed geometric design for greater grip.

ADJUSTABLE CALF SYSTEM

• • The boot leg has a replaceable inner polyurethane plate with a heat resistant rubber insert to protect the leg from exhaust heat, wear and tear. The calf plate features an inner double adjustment, which allows to widen the circumference of the boot and accommodate even the wider calves.

FLEX SYSTEM

• • The upper pivot, on the bootleg, improves the flexibility of the boot and the adjustment of the bootleg itself. In this way, the rider can adjust the boot strap at the calf to his personal preference and achieve an improved fit.

ANATOMICALLY SHAPED HEEL

• • The heel is anatomically shaped and manufactured in PU. Its particular form was designed and implemented to provide more safety to the foot in case of twisting. The new heel guarantees comfort and stability.

ASSEMBLED AND REPLACEABLE BOOT LEG - STITCH-FREE

• • The boot leg (upper) is entirely assembled with screws, thus it is stitch-free and totally replaceable!
