

ANKLE SUPPORT BRACE

A single ANKLE SUPPORT BRACE joins the internal and external ankle joint for more support. In the outer lower part, the ankle support brace is equipped with air vents which can be operated by an aerodynamic shaped button. The ankle support brace is made with NYLON material with GLASS FIBER.

Along the entire boot,
on the inside part of the bootleg,
there's a padded upper
lined with air jersey and Cambrelle.
The upper ends with a sturdy pull tab
for easy fitting.

REAR UPPER

The final part of the REAR UPPER
is made with soft material
to allow more comfort to the calf.

Small slots on the joint's central part allows perspiration and air dissipation.

ELASTIC PANELS

The ELASTIC PANELS placed on the front and back joints are internally padded and widens while the foot passes for a comfortable and easy fitting.

ASYMMETRIC HEEL CUP

ASYMMETRIC and shaped HEEL CUP equipped with a soft fixed insert on the internal side of the ankle for better adherence and contact with the bike.

SLIDER

Replaceable SLIDER,
equipped with ventilation system.

RACING SOLE
