

FAQ

What is the Self Canceling Turn Signal Module™? It is a electronic flashing relay that is meant to completely replace your existing mechanical flashing relay(s), or be a stand alone flashing relay to vehicles that do not have turn signals. It works with both LEDs or incandescent lights up to 10 amps per output. This module does not require any load equalizers because it is a self-timed electronic relay.

What is the Tri-Star™ Module? It is a electronic flashing relay that is meant to completely replace your existing mechanical flashing relay(s), or be a stand alone flashing relay to vehicles that do not have turn signals. It works with both LEDs or incandescent lights up to 10 amps per output. This module does not require any load equalizers because it is a self-timed electronic relay.
