

Slim Line SLT

Providing dual layer technology with Spider's ART vibration damping inner core for riders using thumb throttles. The SLT's outer gel layer provides a very tacky surface that is easy to hang on to, a small flange that protects your hand, and a closed end to keep out water, snow and mud. The Acoustical Rebound Layer is engineered with your riding in mind. Spider's grip design has a specially shaped core with an innovative boundary layer. This gives you a grip with less vibration at the hand which reduces hand fatigue and arm pump, and also lets you listen to feedback from the machine and tailor your response accordingly.

Spider SLT grips feature Traction Gel - a specifically formulated compound that sheds mud and water so that it stays tacky even when wet making it easier to hold on. This gives better control and less rider fatigue. Just like a competition tire, Traction Gel breaks in and continues to offer top performance throughout the life of the grip.

Dual Gel layers dampen vibration and provide great traction.

A narrow flange and closed end make the SLT perfect for riders using thumb throttles.

The SLT grips are available in 9 colors. Titanium, Graphite, Red, Blue, Yellow, Orange, Black, Pink and Green.

SLT ATV grip for 7/8 handlebar with NO Throttle Tube: 120mm Long x 29.0mm Outside Diameter
