

## F.A.Q. For Stabilizers:

The Sputhe PosiTrac Dyna Chassis Stabilizer fits all models of Dyna from 1991 to 2017. We recommend using stock OEM motor mounts for best results.

We recommend replacing the stock motor mounts if there is more than 30,000 miles of use on the current mount or if they show any sign of wear.

The Stabilizer attaches to the motor mounts it does not replace them.

The Sputhe PosiTrac Dyna Chassis Stabilizer rear brackets are made out of durable 4130 cast steel.

The Sputhe PosiTrac Dyna Chassis Stabilizer will work in conjunction with the following but may require minor adjustments depending on brand and placement:

Crash bars,  
Chin Fairings,  
Oil Coolers,  
and Tool Bags.

The Stabilizer is compatible with extended shocks. The Front Stabilizer is not compatible with Chopper Hauss, Big Bear or Predator aftermarket motor mounts.
