

# Quality is First!

TechSpec's core value is that of quality. We design, engineer and manufacture all our components with quality being first! We stand behind ALL our products and deliver that quality to you...the rider!

## The Tank Grip Concept

Body and weight control are essential techniques with not only aggressive/performance riding, but also with sport/casual touring. By gripping the tank with your legs, you will improve overall control of your body motion, weight position and posture.

## The Product

GRIPSTER Tank Grips:

Increase/maintain control of weight/body position. Eliminate sliding. Improve riding style. Decrease body fatigue. Improve weight adjustment. Protect tank from abuse. Improve re-sale value. Remove and re-use. Customize for functionality as well as creativity. Provide benefits of grip material without damaging leathers  
Developed in the United States of America

## The Material

TechSpec's theory of achieving a solid grip is based on material properties and surface area contact. Our products are available in two (2) unique materials: Snake Skin and the new XLine. Each of our materials were created for your riding enhancement.

**XLine** tank grips are the neXt generation of TechSpec's Gripster Tank Grip line. "XLine" is a 3M, microfiber grip material, laminated to TechSpec's C3 rubber / Releasable Adhesive. The combination is truly a step above in grip technology. Used by multiple top level race teams and riders:

-GP2: Technomag/CarXperts , Tech3 / -GP3: Drive 7

- Moto America:

-Meen Moto: Josh Herrin / -TOBC Racing, Danny Eslick / -Latus Motors, Bobby Fong and David Anthony

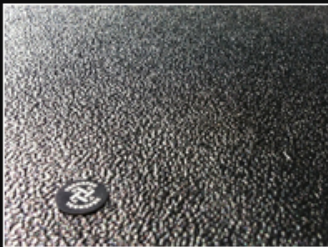

TechSpec's "XLine" tank grips. Truly a step above!

**Snake Skin** is a thin (.125") tank grip with a low profile diamond pattern. With these rubber padding properties, you will feel a positive grip into your tank and less pressure on your wrists, elbows and shoulders. Excellent product for all riders and uses our personal "Releasable Adhesive."

**C3** is a comfortable gummy rubber measuring @ .100" thin. The C3 Grip Material acts more like a "Pad" offering the Ultimate in Comfort and Grip. The diameter of the Rubber has a soft gummy feel allowing your knees to sink into the material, almost like memory foam. Squeeze your tank and feel what solid seat position is and does for you. Will assist in reduction of vibration, increase in control, and increase in comfort.

**High Fusion** is a durable, sleek, low profile Synthetic Rubber @ .035 thin. You will feel the difference the minute you throw your leg over and take a seat. Not to be mistaken as a Vinyl or Grip Tape Material. This Synthetic Rubber has a simple look and low profile feel. Squeeze your tank and feel what solid seat position is and does for you. Will assist in reduction of vibration, increase in control, and increase in comfort.

**True Quality Providing One of a Kind Products!**
