China's No.1 Innovation & High Quality Motorcycle Chains and Sprockets

- Innovatively researching and developing the "Once-Punch-Forming" technology for teeth shape;
- Fit clearance between chain roller and sprocket teeth arcs $\leq 0.05\text{mm}$, superior to domestic competitors (0.3-0.5mm) by 80%, without noise during meshing operation;
- Japan-imported slow-feeding wire-cutting machine for teeth punching mould, with advanced punching technique, teeth arc roughness $\leq 1.6\mu\text{m}$, 50% lower than domestic competitors' roughness ($\leq 3.2\mu\text{m}$) produced with traditional gear hobbing technique, even much superior to national standard ($\leq 6.4\mu\text{m}$), greatly improving wear-resistance and prolonging service life;
- Heat treatment by automatic mesh belt conveyor furnace, teeth surface hardness reaching 56-62HRC, using imported high-tech grease, increasing wear-resistance by 50%, 30,000km guaranteed
- Advanced "Once-Punch-Forming" technology, ensuring concentricity between teeth panel and central hole $\leq 0.05\text{mm}$, rolling teeth $\leq 0.2\text{mm}$, increasing meshing stability between chain and sprocket, preventing chain bouncing and noise occurred;
- Surface stoving varnish technique, such as red, yellow, orange, green, blue, black, etc. meeting various appearance demands;
- Motorcycle chain plate surface electroplated with copper, zinc, nickel, chrome, etc. ensuring chain more corrosion-resistant and modifying visual effect
- High quality alloy steel selected, through heat treatment by automatic mesh belt conveyor furnace, surface centerless grind and shot-peening technique, greatly improving tensile strength and fatigue resistance

VS

Competitors

Innovative "Once-Punch-Forming" fine blanking technology (teeth arc roughness $\leq 1.6\mu\text{m}$), with smooth and good burnishing band, without noise during meshing operation; improving wear-resistance and prolonging service life.

Traditional gear hobbing technique (teeth arc roughness $\leq 6.4\mu\text{m}$), with rough and bad burnishing band, noise occurred during operation, easily worn off and reducing service life.

Clip Type:
Clip type connecting link with loose fit. Can be installed easily with pliers.

Rivet Type:
Rivet type connecting link is the most dependable connecting link. Special riveting tool is required for installation.

Pin Link:
Pin link could obtain the same riveting as other links of your chain. Special tooling is required for installation.

UNIBEAR Chain Cutting Tool

UNIBEAR Chain Cutting Tool is machined from best hardened steel and, is designed to cut our chain pins when removing old chains. It's simple to use and easy to follow the instructions.

UNIBEAR X-Ring Chains are specially designed to be used on high powered as well as touring bikes. With a special 4-lips seal ring - X-Ring safely sealed lubrication inside the chain during its lifetime. With low frictional resistance, UNIBEAR X-Ring Chains operate much softer & cooler and, engaged better than traditional O-Ring chains. Also X-Ring increased the lifetime of the chain considerably as well.

UNIBEAR ATV Chains use low friction & long lifetime X-Ring and, its performance are good for all quad types.

DOES YOUR CHAIN HAVE ALL THESE FEATURES?

UNIBear Quadra-X Ring seals reduce friction by 50% compared to conventional O-rings. They keep dirt out and the high-tech grease in.

Solid bushings and rollers are precision centerless ground and shot-peened, to minimize friction and maximize strength.

Sideplates made of high-strength, heat-treated alloy steel to resist chain stretch.

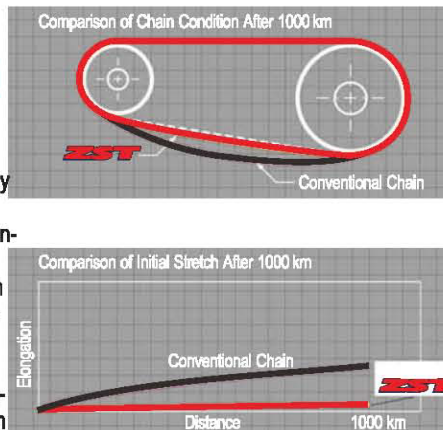

Protruding bushings help extend O-ring life and inhibit kinking.

Sideplate holes reduce weight, lower friction, dissipate heat, extend O-ring life, and facilitate self-cleaning

Pins are quad-staked to the sideplates for reliability.

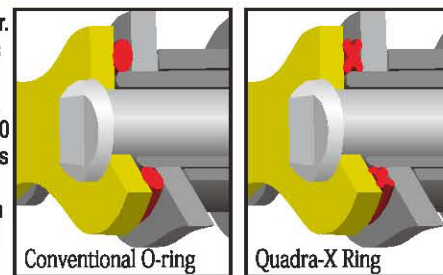

UNIBear Chains new Zero Stretch Technology virtually eliminates measurable chain stretch in the first 1000 km of use. ZST puts an end to the hassle of retensioning the chain after the initial break-in period, when most chain stretch occurs. For racers, this can mean going several race weekends without a single chain adjustment. You also get the confidence of knowing that a chain with ZST will stay within wear tolerances throughout its entire service life. ZST is standard on the 530 ZZZ chain, and available as an option on the 520 RXO chain and all MVXZ series chains.

UNIBEAR QUADRA-X RINGS VS. O-RINGS

No one knows more about sealed chains than UNIBear. After all, we invented the O-ring chain for motorcycles way back in 1995. Since then, we've improved on our invention with the revolutionary Quadra-X Ring seal. The Quadra-X Ring reduces friction by as much as 50 percent, thanks to its smaller contact area. Yet it offers even better sealing than a conventional O-ring, because it has twice as many contact points between the ring and sideplates. It's the optimal combination of maximum sealing protection with minimum friction.

Many sealed chains are a trade-off. In the quest for low friction, the quality of the seal between the rings and sideplates is compromised. While such chains may offer lower friction initially, their loose tolerances ultimately lead to lubricant loss, premature wear, and increased friction in the long run. UNIBear Quadra-X Ring chains combine reduced friction and long wear-lab tests show that they last 50 percent longer than standard O-ring chains.

UNIBEAR CHAIN LIMITED WARRANTY

UNIBear O-ring and Quadra-X Ring Chains are warranted against defects in materials and workmanship for 24 months/unlimited mileage (street use) or 12 months/unlimited mileage (off-road use). The warranty period begins on the date shown on the sales invoice or receipt. This warranty is void for any use other than those applications recommended by UNIBear Chain. This warranty does not cover the use of UNIBear Chains in competitive events, or on motorcycles that have been modified.

UNIBEAR[®]

**RUSHED OUT OF THE COUNTRY
CROSS THE WORLD**

Seventeen years of spring flowers and autumn fruit,
wind and rain has washed out the white lead
on the road

But can not take off the enthusiasm and devotion
of Yongli people.....

Have great ambition and high aspiration

Only with foresight can you have future, only with
dream can you soar highly

New starting piont and new vista, limitless space
and time and never stop struggle.....
