

HK622 -The "Hooker"

The Hooker is designed to give the rider a point to hook bungee cords or a bungee net without having to place the hard hooks onto the painted or chromed surfaces of the motorcycle. This helps prevent scratches and offers a strong, easily accessible mounting system for items that need to be secured on the passenger seat. The Hooker is easily installed on most bikes. In its narrowest form it will accommodate motorcycles with a seat/fender width of approximately 7". At its widest point, attained with our new Hooker extension, it will fit most bikes with a seat/fender width of approximately 16". The Hooker can be manipulated to fit different shapes of passenger seats by angling the hook and loop yokes according to your layout. The Hooker can also be cut for seat mounting posts, obstructions and excess material removal. Keep at least 1" of hook and loop over-lap to ensure a strong connection.

The Hooker - HK622 can be installed on most makes and models of:

CRUISER
SPORT TOURER
SPORT BIKE
ATV
DUAL PURPOSE
DIRT BIKE
SCOOTER
