

Lock & Alarm Features

XENA Security's unique Alarmed Disc-Lock feature icons can be found on all XENA packaging. Further description is available in the XENA instructions manual, through the Product Support page.

Alarmed Disc-Lock Features

Double-Locking System

With XENA's double-locking system, body and locking pin act as one piece of metal, making it extremely difficult to remove by wedging, hammering or other attack.

Push-down Locking System

XENA push-down alarmed disc-lock works with a simple push and click. The spring-loaded locking pins pop out when unlocked.

Stainless-Steel Body

XENA XX10, XX14, XX15, XN Series, XSU U-Locks and Bullett-Lock Alarms are built from high-grade, high-nickel content stainless steel. Quality materials, top-notch design and rugged build-quality make XENA locks highly resistant to the elements for years of use in top condition.

Carbide-Reinforced Locking Pin.

Locking pins are re-enforced with carbide, offering maximum resistance to saw and angle-grinder attack.

Ice Spray Proof

Thieves commonly use an ice spray to render cheap materials brittle and easier to crack. All XENA locks are designed to resist this type of attack.

14mm Locking Pin

All XX14, XX15 and X2 alarm-less disc-locks feature carbide-reinforced 14mm locking pins.

10mm Locking Pin

All XX10 disc-lock alarms feature carbide-reinforced 14mm locking pins.

6mm Locking Pin

All XX6 and XZZ6L disc-lock alarms feature hardened-steel 6mm locking pins. Perfect for on-the-go scooter security, fits virtually any scooter or motorcycle.

Alarm Features

120dB Alarm

All XENA disc-lock alarms feature a 120dB alarm to warn thieves. Powered by a single CR2 long-life Lithium battery for reliable power in a broad range of weather conditions.

Auto-Arm/Disarm

The alarm automatically arms when locked to the disc and disarms when removed. No need to remember to arm your alarm.

Shock & Movement Sensors

All XENA disc-lock alarms and Bullett-lock alarms use shock and motion sensors. Any metal-on-metal contact trips the shock sensor; any significant movement trips its counterpart.

When it comes to quality motorcycle locks, XENA is the brand you can depend on.
